## Projected Child Victims by Offender Type

Table showing

- 1 % of Perpetrators by Type: Professional, Family, Other
- 2 Projected average number of victims over 10 years
- 3 Total victims out of 1000, per Type

Sample 1000 child victims

This illustrates that, for example, if the Professional Type commits on average offences against 5 children over 10 years, this Type (6.2% of offenders) will victimise 556 of the sample 1000 victim children.

Where the victim rate is 50 per professional over 10 years, this would account for 926 of the victims. Or 6.2% account for 92.6% of victims whilst family and others (93.8%) account for 7.4%
